

BUWAtop Metal roof systems

A metal roof system is the best solution for covering round shape water storage tanks. The roof is separated in a number of panels, which are fitted together with watertight connection technology. Panels are light and guarantee a simple and quick assembly of this roof system.

On the top of the roof a metal cover plate will be mounted. The cover plate is fixing the panels and has a function as protection against heavy winds.

All roof panels are fixed with metal spanners outside the tank. Panels can be tightened in correct position.

Use of metal roofs will prevent heavy winds damages to liners!

Advantages of BUWAtop:

- *Very stable and solid construction.*
- *Quick assembly by special connection technology.*
- *Column and foot can be used as overflow or pump line connector.*
- *Can be mounted on existing tanks.*
- *Options available: ladders, inspection door and roof outlets.*
- *Available till diameter 10,92 meter. Larger sizes will follow soon.*
- *Available in galvanized and coated versions.*
