

WATER TECHNOLOGY

BUWA^{top}

The **BUWA^{top}** steel tank cover is the perfect and very rigid solution to cover a complete water storage system.

The **BUWA^{top}** is the optimal solution to cover especially smaller and midsize tanks.

The **BUWA^{top}** will be supported by a central synthetic post, which is positioned in a HDPE foot. This column foot will be installed underneath the liner into the ground.

The synthetic and centrally positioned post can easily be used for pump-and/or overflow. There need only a few holes to be drilled in the bottom or top end of the column.

BUWA^{top} is a robust metal solution which covers the water storage tank completely for influences from outside.

Advantages

-  Complete closed cover system to avoid rubbish, UV influence and rain water.
-  Quick and easy installation by use of limited parts.
-  The column foot is installed underneath the liner into the soil.
-  Available up to a tank diameter of 13 meters.
-  Accessories available ; outlets, inspection doors and ladders.
-  Reinforcement tube to strengthen tank for heavy wind areas.
-  Long life time and low maintenance costs.
-  Packaging in craddles to avoid transport damages.
